PROTON+ Compiler Development Suite

DCD

2ⁿ -power decoder of a four-bit value. **DCD** accepts a value from 0 to 15, and returns a 16-bit number with that bit number set to 1. For example: -

```
WRD1= DCD 12      ' Set bit 12.  
PRINT BIN16 WRD1  ' Display result (%0001000000000000)
```

DCD does not (as yet) support **DWORD**, or **FLOAT** type variables. Therefore the highest value obtainable is 65535.

DIG (BASIC Stamp version)

In this form, the **DIG** operator is compatible with the BASIC STAMP, and the melab's PicBASIC Pro compiler. **DIG** returns the specified decimal digit of a 16-bit positive value. Digits are numbered from 0 (the rightmost digit) to 4 (the leftmost digit of a 16-bit number; 0 to 65535). Example: -

```
WRD1= 9742  
PRINT WRD1 DIG 2      ' Display digit 2 (7)  
FOR Loop = 0 TO 4  
    PRINT WRD1 DIG Loop  ' Display digits 0 through 4 of 9742.  
NEXT
```

Note

DIG does not support **FLOAT** type variables.
